

Preparing 160L of a 50g/L Salt Solution using a Magnetic Mixer

Mixing system: Newmix®- Levtech® Magnetic Mixer

Mixing bag: 200L M-Mix vessel

Mixing type: Powder-liquid

The Newmix-Levtech Magnetic Mixer is a compact and non-invasive single-use mixing system. The heart of this system is a mixing bag incorporating an innovative bottom-mounted magnetically-driven impeller capable of providing efficient high-torque mixing for all powder-liquid and liquid-liquid mixing applications. The impeller rides on a low-friction, inert bearing assembly designed to ensure low particle shedding while allowing mixing of very high powder loads in large liquid volumes. All product-contacting surfaces are 100% disposable.

Introduction

Powder-liquid mixing is a common requirement in biopharma processing. In order to maximize mixing efficiency for powder-liquid applications, the Magnetic Mixer is available with a large (6.35") impeller.

In this experiment, a Magnetic Mixer was used to prepare a quantity of a highly concentrated salt solution.

Experimental

A 200L Magnetic Mixer mixing bag was filled with 160L of water, and mixing speed was set to 180rpm. A single 8kg addition of sodium chloride (NaCl) powder was made to the mixing bag, resulting in an approximately 50g/L solution. The solution homogeneity was monitored via real-time conductivity readings.

Results

The accompanying chart shows solution homogeneity in the bag during mixing.

After the NaCl powder addition, mixing was found to be complete within approximately 4 minutes. At no time during the mixing cycle did the impeller stall or hesitate.

Conclusions

The Newmix-Levtech Magnetic Mixer system is well suited to preparation of high concentration buffer salt solutions. A powder-liquid mixing bag, which includes a large, bearing-mounted magnetic impeller, is a good choice for such applications.

Mixing times in the 4 minute range are typical at the tested volume and salt concentration.
